HINT Final Report form

Name of partner: Chablais Geopark

Period covered by report: 01/03/2013 to 30/06/2013

Key objectives during report period:

 Delivery of the first phase of the new Geopark website with the newly developed content available on-line to the public. This will be for both the version for computers, as well as the mobile device version.

Did you meet all your objectives?
(Highlight/explain any problems)

We are very nearly there. All technical work is completed. Some content to be finalized.

Summary of progress to project completion

 GeoRoute workstreams:
- Website. Good progress and all technical aspects of the site have been completed. Content currently being finalised by Geopark team for integration later this year.

- Database. The database continues to be refined into a core of 23 sites (which correspond to the 23 geosites of the Georoute), and the remainder geosites of the geopark.

- Armoy. The 3D realisation has been finalised and is being integrated into the website.

What have you learned from this project?
(Highlight/explain how you are developing your knowledge/use of new technologies)

 Our learning has been more limited during this phase as the consultants have finalized the new technology framework and are now integrating the geopark content.

How have you tried to ensure best practice throughout the project?
(Highlight any support/advice you have received)

We continue to apply the same standards to ensure best practice:
- Regular meetings with all involved parties
- Validation meetings with key decision makers
- Close communication between the Geopark and the consultants developing the new technology solutions

Also, development tasks have been divided between the SIAC staff and Geopark team to ensure that the correctly qualified people are overseeing and implementing the relevant work-streams.

Is there anything you would do differently in the future?
(Explain)

For this phase the works have gone well.

Overall do you feel the project has been a success?

List any publicity for your project (e.g. newspaper article, radio, magazine etc.)
(Please attach a scan or text where possible)

Please give details of any community engagement (e.g. workshops, schools activities, volunteer opportunities, launch event etc.)

Give details of any feedback you have received on your use of technology

Any other comments?

All new technology aspects of the program have been completed. Some residual information remains to be integrated but the project is now complete.
